Overview

This release builds upon FlexiCapture 12 Release 4 Update 2, incorporating all features and fixes from that release and its preceding patches.

This patch addresses the necessity to update the Application ID and to enable the configurability and systematic rotation of OAuth secrets. It is imperative for maintaining the functionality of your workflows that connect to Microsoft Outlook and SharePoint.

IMPORTANT: Post-deployment manual actions will be required if you are using import from e-mail via Microsoft Outlook or export to Microsoft SharePoint. You are advised to reauthenticate via OAuth for all profiles concerning document import from Microsoft Outlook and document export to Microsoft SharePoint. This procedure is vital to ensure continued operations.

How to Update

To apply the patch, please follow the standard FlexiCapture update procedure as described in the [System Administrator's Guide](#). Installation packages can be downloaded from the following URLs:

[ABBYY FlexiCapture12 Distributed R4U2 12.0.4.1050.iso](#)

If you are using import from e-mail via **Microsoft Outlook** or export to **Microsoft SharePoint** please follow these instructions to install the Patch and update the project configuration. For more information and detailed step-by-step instructions on re-configuring your document import and/or export profiles please visit [Knowledge Base Article](#) or [contact our technical support team](#).

Installation.

Follow the normal FC update process to install the patch. The following components will be updated

- Application Server (including TMS)
- Processing Server
- Processing stations
- Project Setup Station and other local user stations

ReAuthentication.

Since the Application ID will change, it is necessary to reauthenticate to restore import and export scenarios. While this can be done at any time after applying the patch, we recommend doing it immediately to ensure stable operations.

Reauthenticate input folders using Microsoft Outlook (OAuth):

- Open the import profile
- Reauthenticate (new Application ID will be used)
- Save changes

Reauthenticate export profiles to SharePoint (OAuth):

- Open the export profile in a Document Definition
- Reauthenticate (new Application ID will be used)
- Save changes

Additional Information:

Ensure all system prerequisites and backup procedures are followed before applying the update.

For any questions or assistance, please contact [Customer Support](#).
