# ABBYY Vantage 2.7.3 Release Notes

## About ABBYY Vantage

ABBYY Vantage is a comprehensive intelligent document processing (IDP) platform that provides AI-powered cognitive services, as well as pre-trained and trainable skills that can 'understand' business documents and extract actionable data and insights.

ABBYY Vantage is a no-code / low-code platform that makes today's digital worker and processes smarter and empowers the new citizen developer to accelerate digital transformation initiatives and expand automation to new processes in a fast and simple way, making an immediate impact on business results and customer experience.

To facilitate the exchange and use of Vantage skills and other technology assets, including connectors, demo apps, and custom activities, ABBYY offers a Marketplace to its customers, partners, and the wider public. The ABBYY Marketplace can be accessed at <https://abby.com/marketplace/>. The ABBYY Marketplace is designed to share knowledge and solutions, as well as increase re-use to accelerate implementation and reduce effort. Assets acquired from the ABBYY Marketplace can be used in ABBYY Vantage via the Vantage Skill Catalog.

## About this Release

In this Vantage release, we have implemented key platform optimizations, enhanced security, and improved user management capabilities.

The Key Enhancements section describes functional updates introduced in this version.

The Bug Fixes section lists issues resolved to improve system stability, security, and overall performance.

## Key Enhancements

### External Identity Auto-Provisioning

- Tenant Administrators can now define a default role for users created via external identity providers.
- New users are automatically assigned this role upon first login, enabling immediate platform access with Administrator intervention.
- This enhancement streamlines onboarding, reduces manual role assignment, and ensures consistent user experience across tenants.

### Database Optimization

- Improved the efficiency of the skill database operations to ensure faster skill management and deletion process.
- A new back-off mechanism prevents repeated attempts to delete the same skill within a 24-hour window if a prior deletion was unsuccessful, eliminating redundant system load and potential deadlocks.

## Bug Fixes

Vantage 2.7.3 includes targeted fixes and performance improvements to strengthen reliability and address customer-reported issues across security, document processing, and system performance.

These updates help ensure safer operation, reduced timeout occurrences, and improved responsiveness during high-volume workloads.

In this release, we've addressed the following issues:

### Security

- Resolved a stored Cross-Site Scripting (XSS) and HTML injection vulnerability that allowed arbitrary JavaScript execution when rendering user-supplied input in process skill activity names. (642930)
- User-provided HTML links are now properly sanitized and no longer rendered directly within the interface. (642930)

### Conversion Engine

- Optimized the Office Conversion service to prevent timeout errors under high-load conditions, improving conversion reliability for large-scale parallel processing. (625051, 628191, 632879)

### Manual Review

- Fixed an issue where certain documents occasionally failed to load correctly in Manual Review, resulting in a blank page with no document view or data form displayed. Refreshing the page no longer leaves the view blank. Documents and data forms now load as expected when tasks are opened for review. (633651)
