About the Release

This release builds upon FlexiCapture 12 Release 4 Update 8 and includes all improvements and fixes from that release and its previous patches.

For any questions or assistance, contact [Customer Support](#).

Improvements

The following improvements have been made to this release.

- Updating Code signing certificate for Windows binaries in FlexiCapture
- Client secret dependency removal in FlexiCapture for Microsoft OAuth2 processing
- Upgraded ICAAS Function Apps Runtime environment to .NET 10 Isolated
- FlexiCapture documentation migrated to docs.abbey.com site from help.abbey.com.
- The Bug Fixes section lists the issues that have been fixed in FlexiCapture in this release.

Feature Request

Zendesk ID	Description
664295	Updating Code signing certificate for Windows binaries in FlexiCapture
664297	
666848	FlexiCapture ICAAS cannot assemble documents that have more than 30 pages. This is now increased to support upto 100 pages
667822	
NA	Client secret dependency removal in FlexiCapture for Microsoft OAuth2 processing
NA	Updating Web help links from help.abbey.com to docs.abbey.com pages in all FlexiCapture components

Bug Fixes

Zendesk ID	Description
667101 668220	Resolved collation conflict in dbo.User_GetAvailable after DB upgrade
672932	Exception Queue Tasks Inaccessible in Web Verification Station After Send to Stage
574484 656210	Prefer PDF text layer if available is not used during recognition
656997 657148 679273	Access denied error when filtering batches as a Senior Verification Operator
627018 655856 667234 676906 630499	500 Sharing Violation error when exporting
677555	Some old full-width numbers appear unexpectedly during editing at Web verification station with CJK IME editor

Notes:

 **Windows may display a Microsoft Defender SmartScreen warning during installation**

When you run the FlexiCapture installer, Windows may display the message "Windows protected your PC — Microsoft Defender SmartScreen prevented an unrecognized app from starting." The installer in this release is signed with a refreshed ABBYY code-signing certificate. Microsoft Defender SmartScreen builds trust for a newly signed file based on how widely it has been downloaded, so a recently issued signature is flagged as unrecognized until that reputation accumulates. To verify the file is genuine, right-click the installer, select Properties → Digital Signatures, and confirm ABBYY is listed as the signer. Then select More info → Run anyway to continue. The warning stops appearing as reputation builds.

If antivirus software actively blocks or quarantines the installer, that is a different problem. Send that one to ABBYY support.

👉 **Unblock the installer before running it on Windows Server**

Windows marks files downloaded from the internet as untrusted. On Windows Server 2025, this can stop the installer when it deploys distributed components, and the installation wizard will not continue. Before you run the installer, right-click the downloaded file, select Properties, select the Unblock checkbox on the General tab, and select Apply. If you downloaded an archive, unblock the archive before extracting it so that every extracted file is cleared. The installation then completes normally.

👉 **With this release, the client secret dependency has been removed from FlexiCapture's Microsoft OAuth2 processing.**

- *Customers would be required to upgrade the stations after this release. For existing Image Import Profiles (IMAP, GraphMail) users must re-login once after the release post the station upgrade.*
- *This one-time login ensures that the token refresh mechanism functions seamlessly going forward.*
- *After re-authentication, the fix will apply correctly, and imports will continue without repeated login prompts.*
